

L-20 (Op - Amp)

Open loop config:

For ideal Op-Amp,
 $R_{in} = \infty$, $R_{out} = 0$
 $I_- = I_+ = 0$, $A = \infty$

$$V_d = V_+ - V_-$$

$$V_o = A V_d = \begin{cases} V_{s^+} & \text{if } V_d > 0 \\ V_{s^-} & \text{if } V_d < 0 \end{cases}$$

Some Applications of Op-Amp:

- ① Comparator
- ② AC ON/OFF
- ③ Smoke Detector

Negative Feed Back (Closed loop config):

$$\text{When } A = \infty, V_o = k V_i$$

* In feedback circuits the output slowly stabilizes.

$$\text{Since } V_o = \text{stable} \Rightarrow V_o = A V_d \Rightarrow V_d = \frac{V_o}{A} = \frac{\text{integer}}{\infty} = 0$$

∴ In negative feedback,

$$V_d = 0 \\ \Rightarrow V_+ - V_- = 0$$

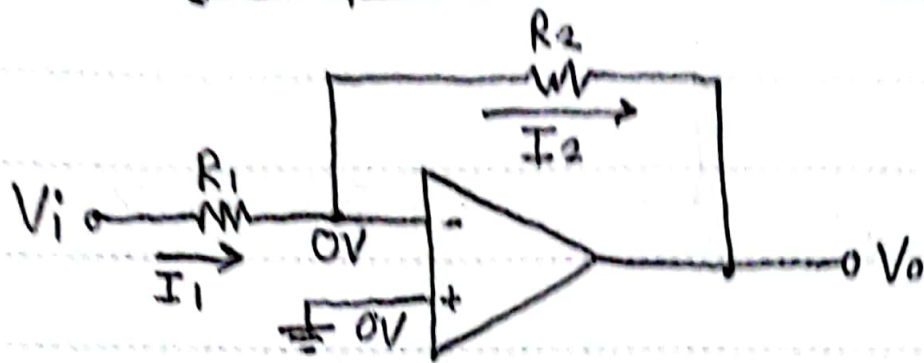

$$\Rightarrow V_+ = V_-$$

$$\begin{cases} I_+ = 0 \\ I_- = 0 \end{cases}$$

* Basic Structure:

① Inverting Amplifier:

$$I_1 = \frac{V_i - 0}{R_1} = \frac{V_i}{R_1}$$

$$I_2 = I_1 = \frac{V_i}{R_1}$$

$$I_2 = \frac{0 - V_o}{R_2} \Rightarrow V_o = -I_2 R_2$$

$$\Rightarrow V_o = -\left(\frac{V_i}{R_1}\right) R_2$$

$$\Rightarrow V_o = \underbrace{\left(-\frac{R_2}{R_1}\right)}_{\text{Gain}} V_i$$

Eg: $y = 1.5x$

↑
Cascading Amplifier

② Inverting Adder :

③ Differentiator :

$$V_c = V_i - 0 = V_i$$

$$I_c = C \frac{dV_c}{dt} = C \frac{dV_i}{dt} = I_1$$

$$I_1 = I_2 = I_c$$

$$\Rightarrow I_2 = \frac{0 - V_0}{R} \Rightarrow V_0 = -I_2 R$$

$$\therefore \boxed{V_0 = -RC \frac{dV_i}{dt}}$$

Eg:

$$\text{if } V_i = 10 \cos(2t)$$

$$V_0 = -RC \frac{dV_i}{dt}$$

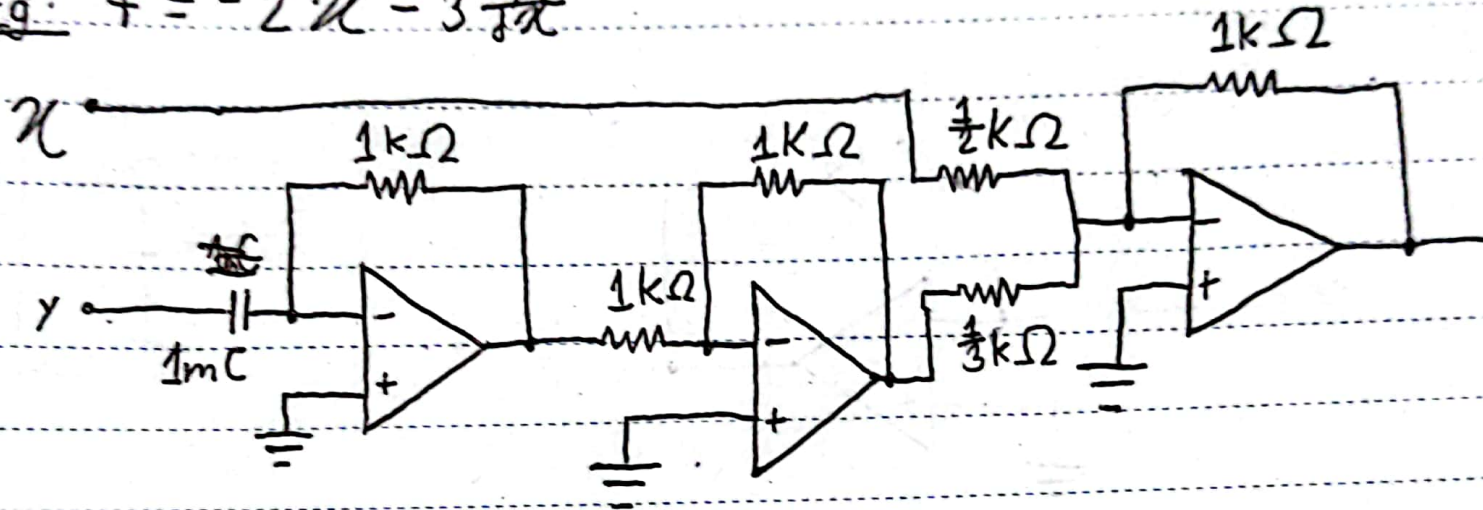

$$= -(2000) \left(\frac{3}{1000} \right) \left(\frac{d}{dt} (10 \cos 2t) \right)$$

$$= -6 (-20 \sin 2t)$$

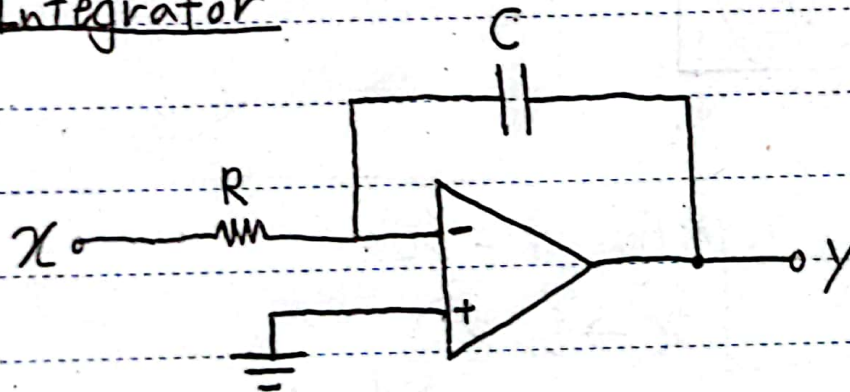

$$= \boxed{120 \sin 2t}$$

Eg: $f = -2x - 3 \frac{dy}{dx}$

103 1

④ Integrator

$$y = -\frac{1}{RC} \int x dt$$

⑤ Logarithmic Exponential

$$y = -e^x$$

Conditions:

$$I_s R = 1$$

$$V_T = 1$$

$$* I_D = I_s \exp\left(\frac{V_D}{V_T}\right)$$

⑥ Logarithm

$$y = -\ln(x)$$

Conditions

$$I_s R = 1$$

$$V_T = 1$$

Formulas:

$$① \ln(e^x) = x$$

$$② e^{\ln(x)} = x$$

$$③ \ln(ab) = \ln(a) + \ln(b)$$

* For $f = xy$

$$x \rightarrow \ln x$$

$$y \rightarrow \ln y$$

$$\left. \begin{array}{l} x \rightarrow \ln x \\ y \rightarrow \ln y \end{array} \right\} \ln x + \ln y \rightarrow \ln xy$$

$$\downarrow$$

$$\exp(\ln xy)$$

$$\downarrow$$

$$xy$$
